

# PRODUCT DATA SHEET

## Microsoll CIP Unit

### OVERVIEW

#### Membrane cleaning equipment

When the system stops automatically or manually, cleaning with water must be done for flushing the surface for preventing the clogging by settling of ions inside water in membrane housings. Depending on the raw water quality, when the membrane performance, product water begin to decrease, chemical cleaning must be done. Membrane cleaning procedure is done to prevent membrane clogging and lengthening membrane life.

#### Application field

- Municipal water supply
- Sea water desalination
- Energy plants
- Oil refining
- Agricultural industry(Greenhouses)
- Chemical industry
- Paper-making industry
